

**EDGEWOOD
COLLEGE**

ENGINEERING DUAL-DEGREE

UW-Platteville Collaborative Program

The Engineering Dual Degree allows students to complete two degrees simultaneously. Students will earn a Bachelor's of Science degree in Physics from Edgewood College, as well as an accredited Bachelor's degree in either Electrical or Mechanical Engineering at UW-Platteville.

In the new program, students take foundational courses in mathematics, physics, and chemistry, and required general education courses at Edgewood College. After three years, students will transfer to UW-Platteville to study either Electrical or Mechanical Engineering.

Edgewood College recently opened a Fabrication Laboratory that provides a space on campus for students to design and fabricate objects using 3D printers, a 50-Watt laser cutter, a CNC machine, and other devices. Students can use the lab for both independent projects and course assignments. The Fabrication Laboratory is an excellent new resource for pre-engineering students to learn principles of engineering and design before they enter the engineering program at UW-Platteville.
